Geophysical Exploration Course 1.2 Participants Evaluation

8		The workshop couldn't complied all our expectations because the teaching was not squeezed and they taught everthing superficial			The training time was very short cause it was all about well design so it must have taught very nice			The workshop was short but very relevant to my field so it was very useful for me and I can use in my daily work
9		The course was useful but we just studied about Confined Aquifer but not Unconfined Aquifer			Training time was very short and pumping test must have been done in the site that we could have analysed plracticaly			It was very ralated to my field and I learned about confined aquifer a lot
10		This training course was very good for us I got a lot of information about my department and improved my knowledge about this section			The length of time was also good and also I am ready every time for my education improvement by these types of courses			NO COMMENTS
11		Because the time was short we didn't have practical work in the area			We have time for the lessons in the project			It was very relevant but we need a little more practical work
12		Before we did not use this method in pumping test and because the practical work was less but some of our problems solved			The time was too short and for pumping test we should have practical pumping test from beginning till end			It was very relevant to my field and the training contents were useful but the time was very short
13		The course taught by expert teachers was very useful			Time of the course was very short and beside theoretical, practical work should have been done			Yes some of our works were relevant to this course
14		The course was very useful but the translator did not translate it properly			Time of the workshop was very short and beside theoretical,practical work should have been done			Yes it was very relevant to my field
15		NO COMMENTS			NO COMMENTS			It was relevant to my field and it was excellent in pumping test section
16		NO COMMENTS			NO COMMENTS			NO COMMENTS
17		This training course is partially because the contents were very good			The training contents were very useful but the time was very short			It was 100% relevant to my field
18		Explanation of formules were not done correct			Time of the course was very short to decrbe the subject perfectly			I can use what I learned from this course in my daily work programs
