

#	Question 1 Score			Question 1: Did the training course meet your expectations? 1=Completely, 2=Partially, 3= Not at all	Question 2 Score			Question 2: What do you think about the overall relevance of training of the course considering topic and relevance to your work? 1= Very relevant, 2= Partially relevant, 3 = Not at all	Question 3 Score			Question 3: What do you think of the overall length of the course? 1=Too short, 2 = Just right, 3 = Too short	Question 4 Score			Question 3: Was the topic of quality control for laboratories new to you and can this help improve the standard of results in you lab?
No.	1	2	3		1	2	3		1	2	3		1	2	3	
1				The training course meet my expectation completely				The course was relevant to my work and I know every thing but I learned to make or have a plan for water sampling and I learned to make sure to have not mistake in a future				The length of the course was just right but every one knows about sampling and they trained already				My reccomendation is that if we have standard Lab or result we new regent for NO3 and the other parameters
2				The training course meet my expectation completely				it was very relevant on my field.				Time was too short and we need to take water samples during tow days and we need two days more for analyzing and writing the report				This course was very important for us because this is very high knoledge we need for three month such kind of courses
3				partially we met our expectation , We can not call it training course because it didn't have anything new, I couldn't learn anything but It was good for our repetation				It was partially relevant and nothing was new in the training course				It was too long it could be two days better				Not very efficient in our field and according the norm of this topic we arrange our daily activities
4				The training cours met partially my expectation , time was short and also from all Laboratories not invited the people may be they have good recommendations				The course topic was relevan to my work ,we need three days more for quality control and the trainers should have specific comment and recommendation for us				Time was too short and it was sharing of information and there was not specific lecture from someone				Just we got and idea and much more is need for us to standard our Laboratory
5				Training course met my expectation partially but we did not any practical test in workshop to know about better				It was relevant and very efficient for us. We learned a lot ,especially participants were from different lab and we learned different mthods and solved some of our problems				The time was too short and we need more time. If the time was enough we could test different types of water source and check the diffrence.				Follow up the training for the future as well. Chapters should be in Dari. Discussed more detail ,sharing of experience between lab in the country .new methds for futur training courses .
6				Partially met my expectation				The corse topics was very relevant my field and was very good				Length of the course was too short				Practice must be more.the number of participant must be increased with mor practical ,new methods, Handouts must be distributed on first day with persian language.Tea break is not regularly on time and must be monotor them
7				Partially met my expectation				It was very nice				Time was short if the time was long we could learn the things better and more				Training time was short to discuss more

8			Completely met my expectation and I am new in Lab and I didn't have any chance to go to site for sampling and this course was so useful for me because I became familiar with method of sampling and finding error			The topic was very relevant and as we know sampling and finding error are very important for the reporting			Just right and I think three days were enough for this kind of course			I am optimistic about this kind of course we share our experience and we can use them in future
9			Partially I met my expectation and the training course was good but there was no new method and some new methods must be used in the future			partially it was relevant on my field and It was only a repeat. No new method is used and wish to use new methods in the future			The length was just right and duration was ok			Not too much effective on our works, but more improved our daily works and some time it was repeat for us
10			Partially met my expectation and I was familiar with lessons and it was just a repeat			It was very relevant on my field, because I am a supervisor of the Lab.			Just right. no new materials			Must be trained in University. Training course material was very good
11			The lessons contained in the training were repeat and we always do them in our daily works			Cause I am Supervisor of water laboratory so it had direct relation with my work			I did not find the new material in training to learn from			New equipment is needed for better learning. We should meet each other every month all water Lab in Afghanistan to find out the errors
12			Partially met my expectation and focused care on taking water sampling			Very relevant			Just to right			training material was good and all of them want to do carefully and must be put in University curriculum
