### Report of water supply net in maymana city

All specification and photos send by DACAAR hydrogeologist from Maymana city without any exact data

-Still no one knows about the results of this project, based on mobile communication with him the contractors left the area and construction of project is stopped now and the deep wells drilled by Recoil or Mumtaz local company funded by GERMANY, unfortunately this project is not completed and even the elevated tank constructed already without positive results but we will follow-up this case and even it is not easy to collect exact data to know the situation of this project.

#### **Three deep wells drilled with 200 meter distance from each other**

-Well No one with following coordinates: N 35.90829 E 64.81445

Elevation 907 m

The lithological log, Eh, Ph and other well specification is not available

-well No two with following parameters N 35.90704 E 064.81445

Elevation 909 m

EC=2390

PH=6.98

W T=19.4

SWL=24.20

Well depth???

Fig.No.1: completed wells but not used

-Well No three: No anymore specification is available

N 35.90597 E 64.81538

Elevation 909

Fig.No.2: Basement construction for elevated tank, Pump house and material for water supply net to be used in a future.

They collected a lot of materials as pipes, fittings to be used for a future for water supply net
